Unit 1, Lesson 11**Practice Problems**

- A scale drawing of a car is presented in the following three scales. Order the scale drawings from smallest to largest. Explain your reasoning. (There are about 1.1 yards in a meter, and 2.54 cm in an inch.)
 - 1 in to 1 ft
 - 1 in to 1 m
 - 1 in to 1 yd

- Which scales are equivalent to 1 inch to 1 foot? Select **all** that apply.
 - 1 to 12
 - $\frac{1}{12}$ to 1
 - 100 to 0.12
 - 5 to 60
 - 36 to 3
 - 9 to 108

- A model airplane is built at a scale of 1 to 72. If the model plane is 8 inches long, how many feet long is the actual airplane?

- Quadrilateral A has side lengths 3, 6, 6, and 9. Quadrilateral B is a scaled copy of A with a shortest side length equal to 2. Jada says, “Since the side lengths go down by 1 in this scaling, the perimeter goes down by 4 in total.” Do you agree with Jada? Explain your reasoning.

- Polygon B is a scaled copy of Polygon A using a scale factor of 5. Polygon A’s area is what fraction of Polygon B’s area?

6. Figures R, S, and T are all scaled copies of one another. Figure S is a scaled copy of R using a scale factor of 3. Figure T is a scaled copy of S using a scale factor of 2. Find the scale factors for each of the following:
- From T to S
 - From S to R
 - From R to T
 - From T to R
